

VOYAGER/Module Adapter

The Voyager Module Adapter (KVMA) is an adapter plate which converts the blade connector on any Voyager Module to a MIL-DTL-26482, Circular Power connector. The circular connector is a rugged 8-2 shell size with a secure locking mechanism. There are no electronic components in the KVMA, the adapter only provides a physical connection between the input connector and the output connector. Thus any voltage applied to the input will appear at the output.

KVMA Standard

KEY FEATURES

- Fits any standard Voyager Module
- Allows a Voyager Module to be powered via a MIL-DTL-26482 Circular DC Power connector
- Available in standard and PoE configurations
