

VOYAGER/KVMA 1.0

The Voyager Module Adapter (KVMA 1.0) is an adapter plate that converts the power interface on any Voyager module to a MIL-C-26482 circular power connector. The circular connector is a rugged 8-2 shell size with a secure locking mechanism.

There are no electronic components in the KVMA, the adapter is rated to support up to 6.5 Amps and provides a physical connection between the input connector and the output connector. Therefore, any voltage applied to the input will appear at the output.

KEY FEATURES

- Fits any standard Voyager module
- Allows a Voyager module to be powered via a MIL-C-26482 circular DC power connector
- Rated for 6.5 Amps
- Available in PW and PoE configurations and regional plug type variations (EU, UK, US, AU)
